

## Health Information Checklist

- Please complete the following medical forms ASAP, preferably at least 30 days prior to arrival:**
  - 1. Self-reported medical history**
  - 2. Have the Health Evaluation completed by a Medical Professional**
    - Physicals are accepted if performed within the last year**
- Review meningitis fact sheet**
- Make a copy of both sides of your medical insurance card and include the policy holder's name and date of birth**
- Submit completed forms all together to:**

**Student Services  
51 W. College St.  
Waynesburg, PA 15370**

It is strongly recommended that you keep a copy of these forms for your records. If you have any questions regarding health forms or medical concerns please do not hesitate to contact Student Health Service at [jdean@waynesburg.edu](mailto:jdean@waynesburg.edu).

- ❖ We are unable to give a room key without the completed medical form that includes proof of meningitis vaccine or waiver per Pennsylvania law.**

## Meningitis Fact Sheet

In July 2002 Pennsylvania passed legislation (Senate Bill 955) requiring all students living in residence halls to **either** have the meningitis vaccine **or** sign a waiver. If you have had the vaccine, your doctor will document that on the Health Evaluation. If you do not have documentation or do not want the vaccine, please read the information below, discuss with your physician, and sign the waiver portion on the health evaluation form. If you have any further questions contact Waynesburg University Student Health Service 724-852-3332.

- **What is meningococcal meningitis?**

Meningococcal meningitis is a disease caused by the inflammation of the protective membranes covering the brain and spinal cord known as the meninges. The inflammation is usually caused by an infection of the fluid surrounding the brain and spinal cord. Bacterial meningitis is usually severe. While most people with meningitis recover, it can cause serious complications, such as brain damage, hearing loss, or learning disabilities.

- **How is it spread?**

Meningococcal meningitis is spread through the air via respiratory secretions or close contact with an infected person. This can include coughing, sneezing, kissing or sharing items like utensils, cigarettes and drinking glasses.

- **Who is at risk?**

Meningococcal disease is more commonly diagnosed among infants, adolescents and young adults. First-year college students living in residence halls are at slightly increased risk compared with other persons of the same age. A vaccine is available and recommended for all first-year college students living in a residence hall. However, any college student can receive the vaccine to decrease their chances of getting meningococcal disease.

- **What are the symptoms?**

Meningococcal meningitis infection may show up in a person by a sudden onset of fever, headache, and stiff neck. It will often have other symptoms, such as nausea, vomiting, increased sensitivity to light, and altered mental status. Later symptoms of bacterial meningitis can be very severe (e.g., seizures, coma). For this reason, anyone who thinks they may have meningitis should see a doctor as soon as possible.

- **Can meningitis be prevented?**

**Yes!** The Centers for Disease Control and Prevention (CDC) recommends 2 doses of quadrivalent meningococcal conjugate vaccine for adolescents 11 through 18 years of age. The first dose should be given at 11 or 12 years of age, followed by a booster dose at age 16. If the first dose is given at 13 through 15 years of age, the booster should be given at 16 through 18 years of age. Serogroup B meningococcal vaccines are also available. The CDC's Advisory Committee on Immunization Practices (ACIP) recommends the use of serogroup B meningococcal (MenB) vaccines for ages 16-23 for short-term protection against the disease, with a preference for administration between ages 16 and 18. Please talk with your doctor about meningitis.

For more information: to learn more about meningitis and the vaccine, call the university health service at 724-852-3332 or visit the websites of the Centers for Disease Control and Prevention (CDC), <http://www.cdc.gov/meningococcal/> and the American College Health Association, [www.acha.org](http://www.acha.org).
